```python
class temperature ():
        def __init__(self,kelvin,celcius):
                self.kelvin = kelvin
                self.celcius = celcius
        def ctok (temp):
                print("The temp. in K is" , (temp+273.15))
        def ktoc (temp):
                print("The temp. in C is" , (temp-273.15))
temperature.ctok(0)
temperature.ktoc(0)
x = input(" ")
```

C:\WINDOWS\py.exe

```
The temp. in K is 273.15
The temp. in C is -273.15
```
